

Each module size has its own template/wall mount attachment; have at least one full-size template per module size.

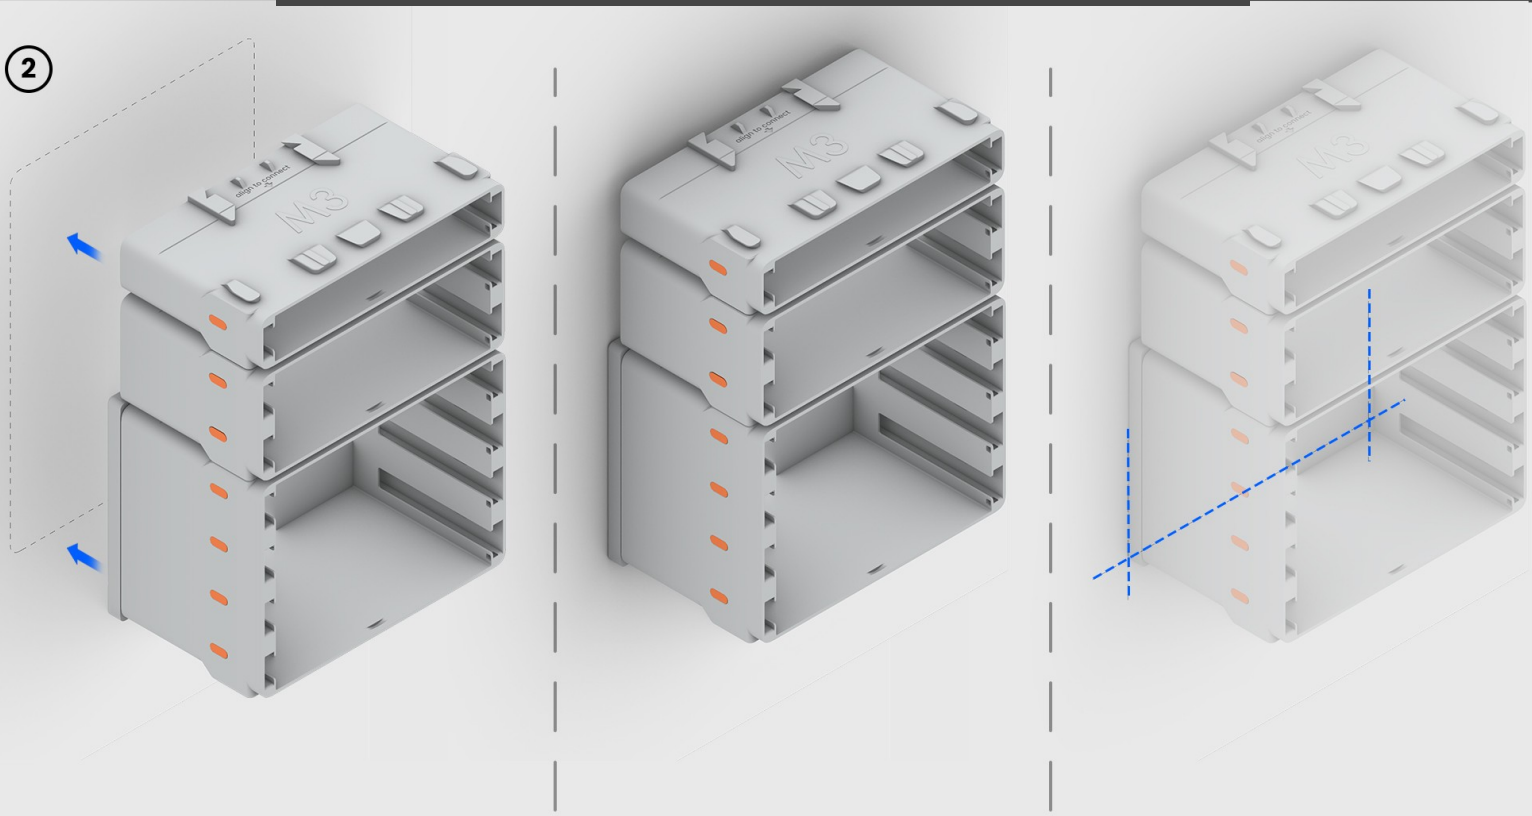

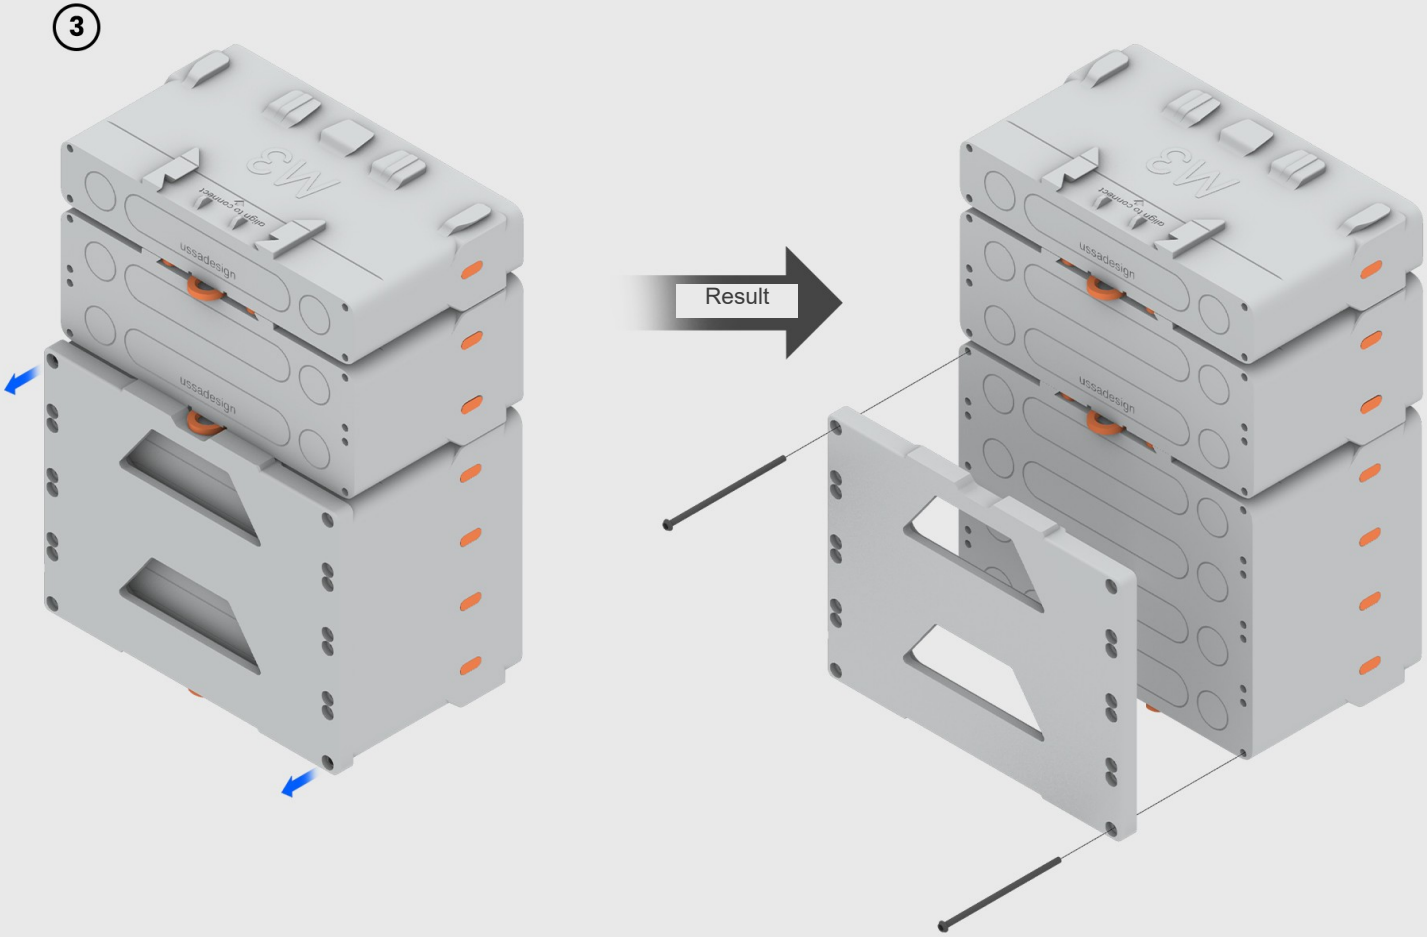

It's technically possible to use 1F variants of wall mounts, but you won't be able to use them as templates later on.

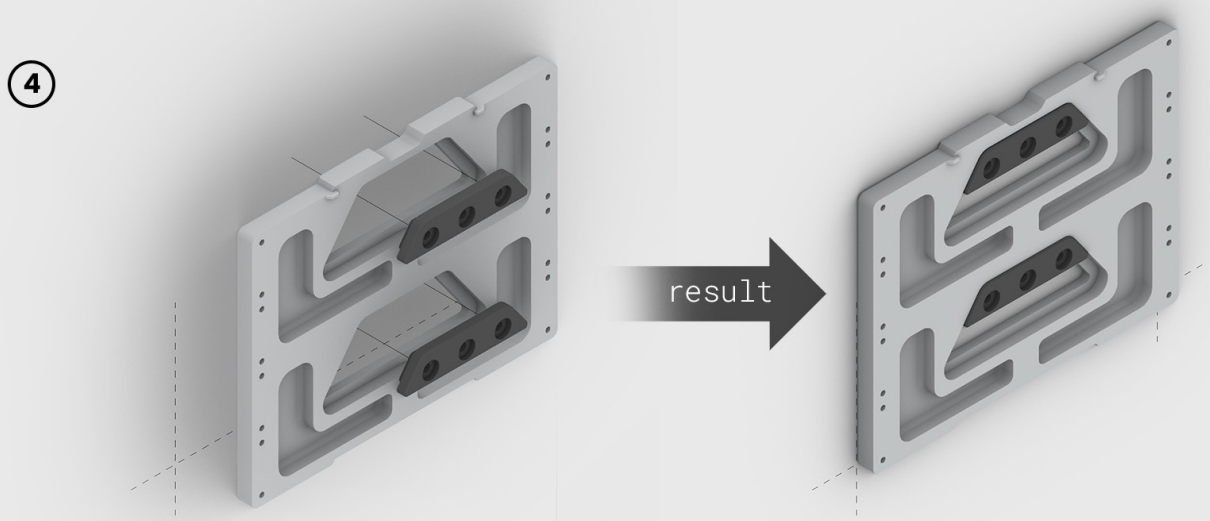

1. Temporarily attach wall mount and use it as a template (see next page).

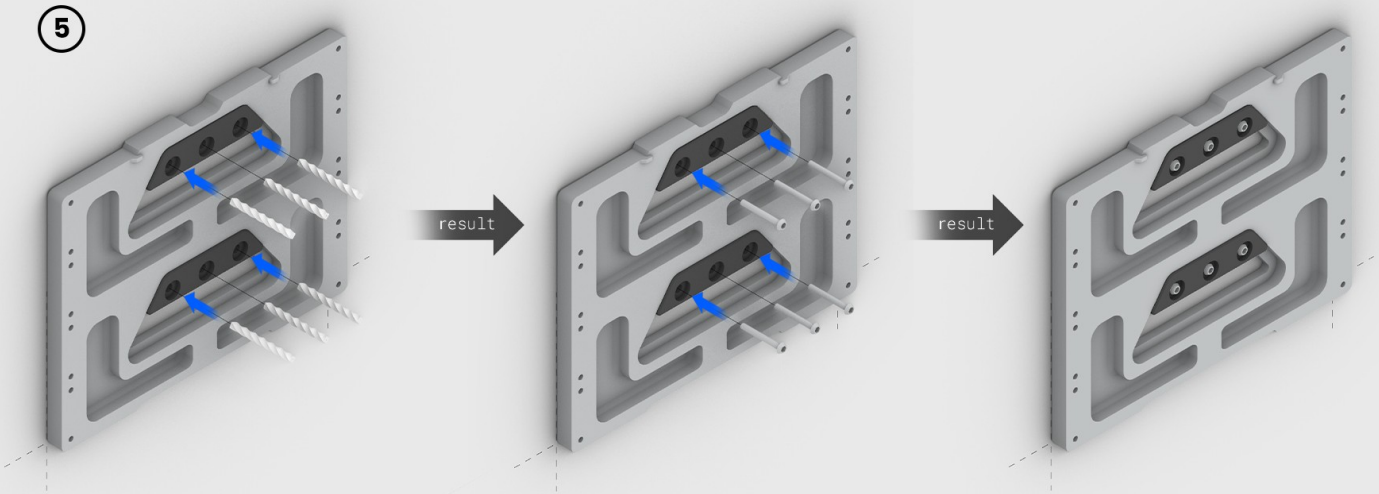

2. Align tower where you intend to hang it, then mark sides and bottom with a pencil.

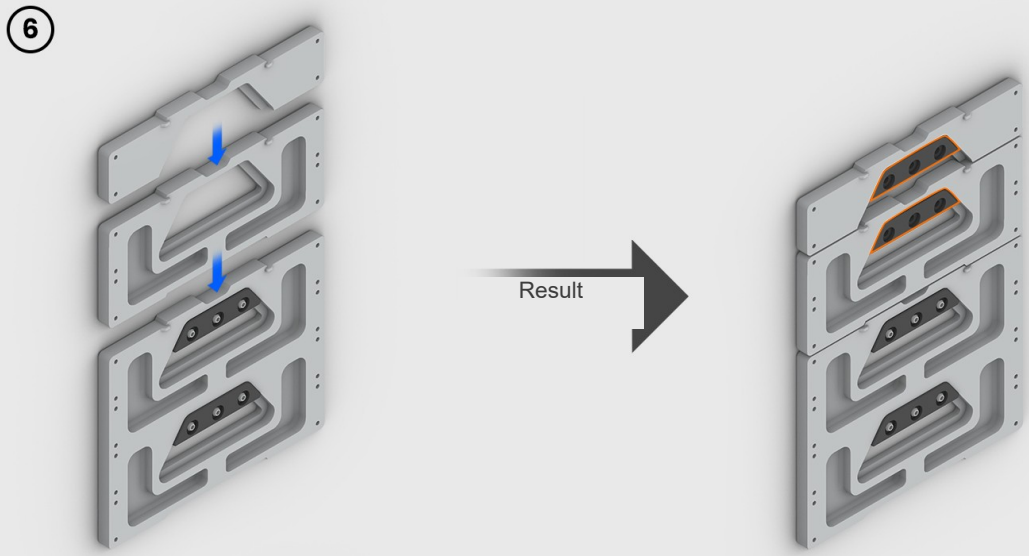

3. Detach wall mount from tower, or use an identical one for the next step.

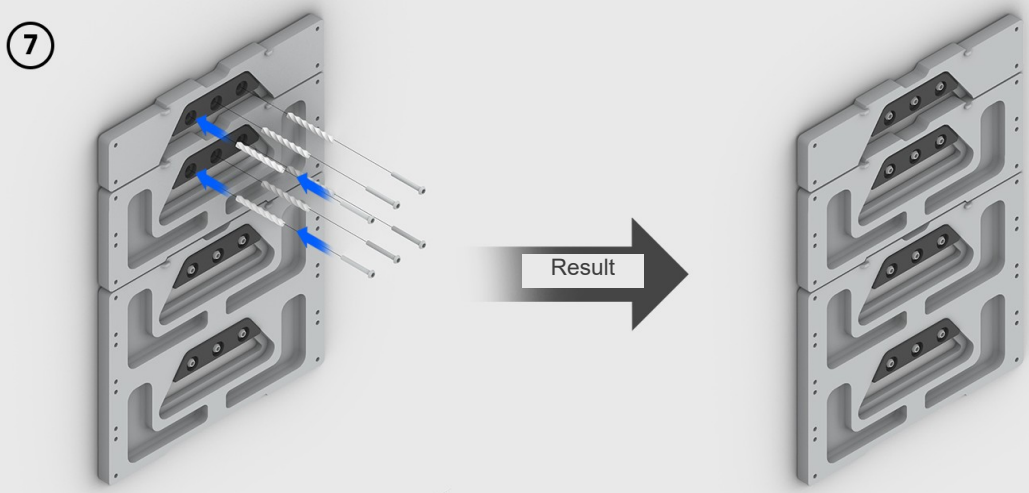

4. place the wall mount and a “second part” to previous marked spot

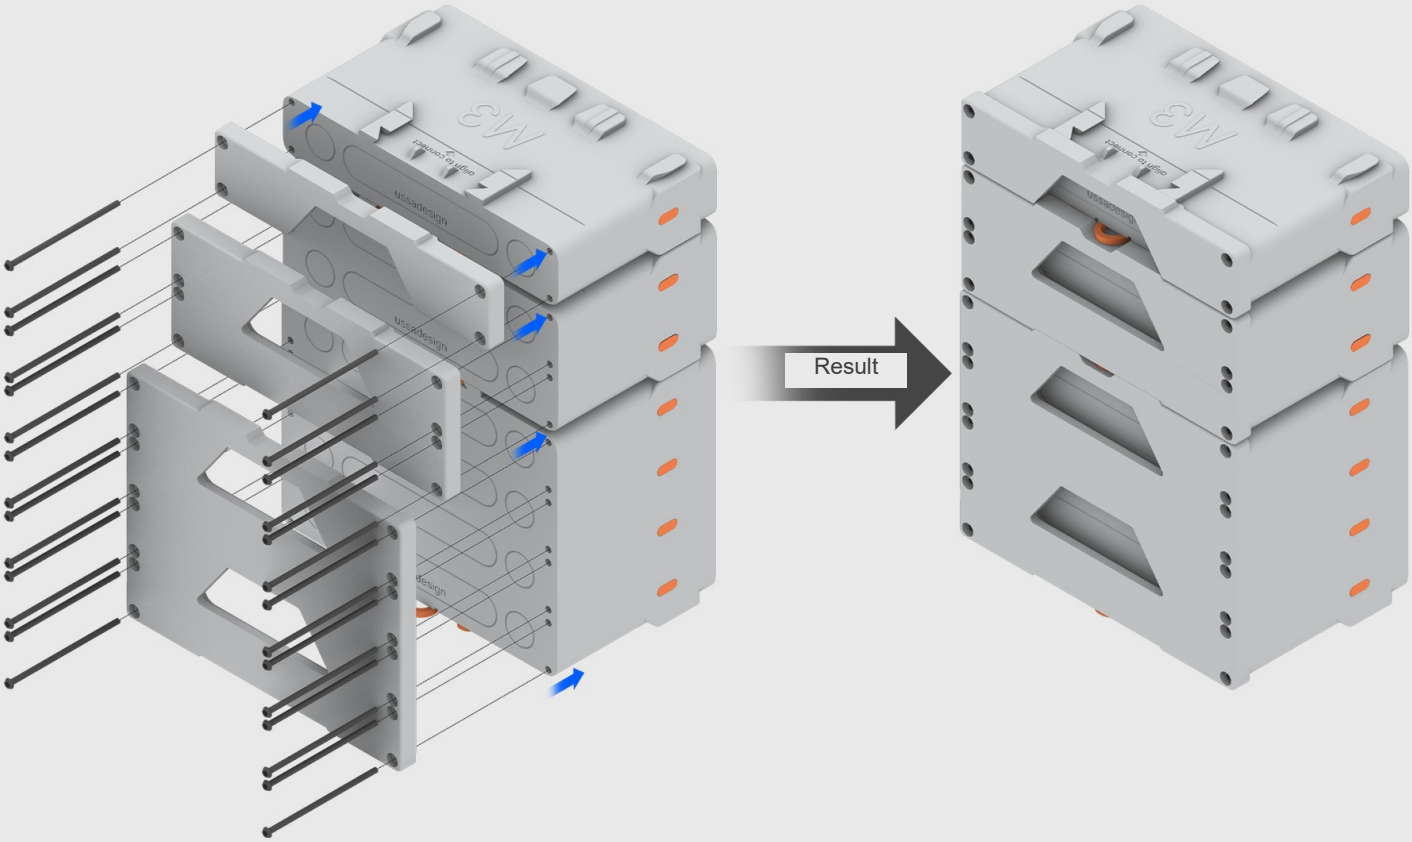

4. Place wall mount and second piece to marked spot; 5. Drill into wall for anchors or use wood screws to attach.

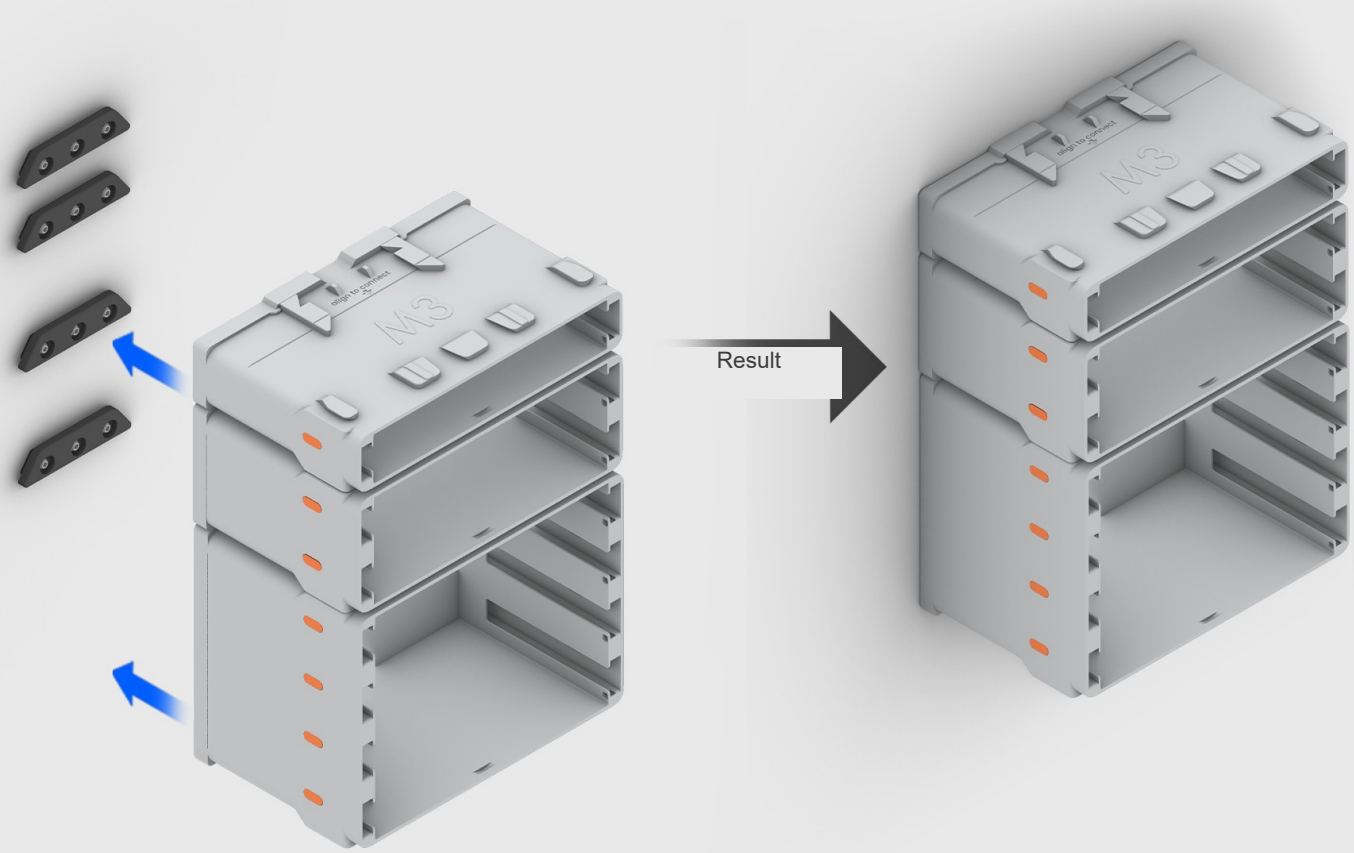

6. After fixing first mount, stack other floors on top; 7. Repeat steps above to secure other floors to wall.

8

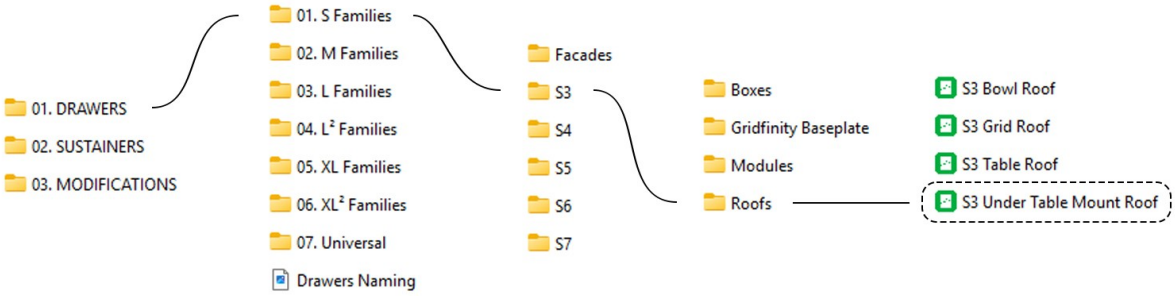

8. Securely attach the wall mounts to the back of your tower.

9

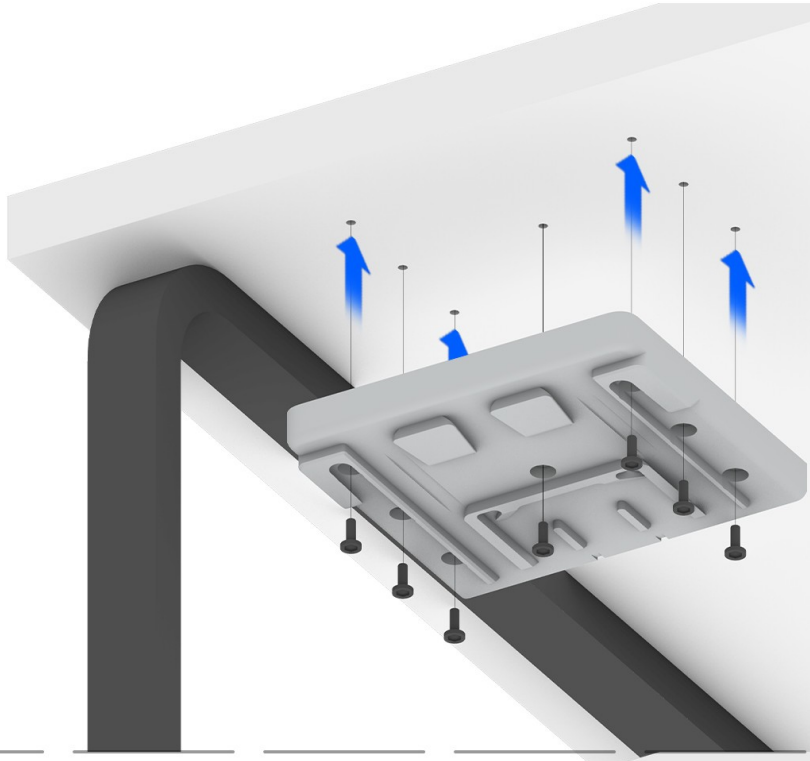

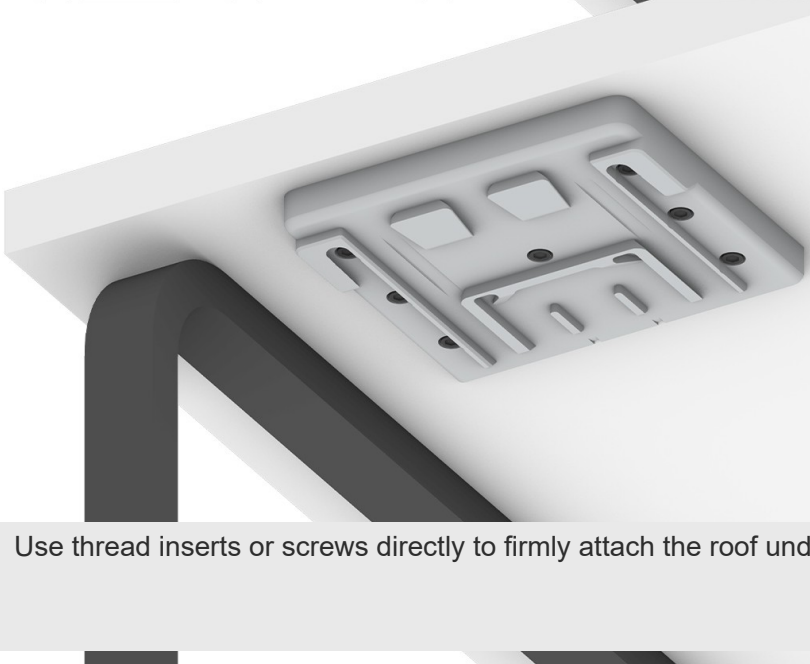

9. After attaching wall mounts, the tower can easily and securely be hung on the wall.

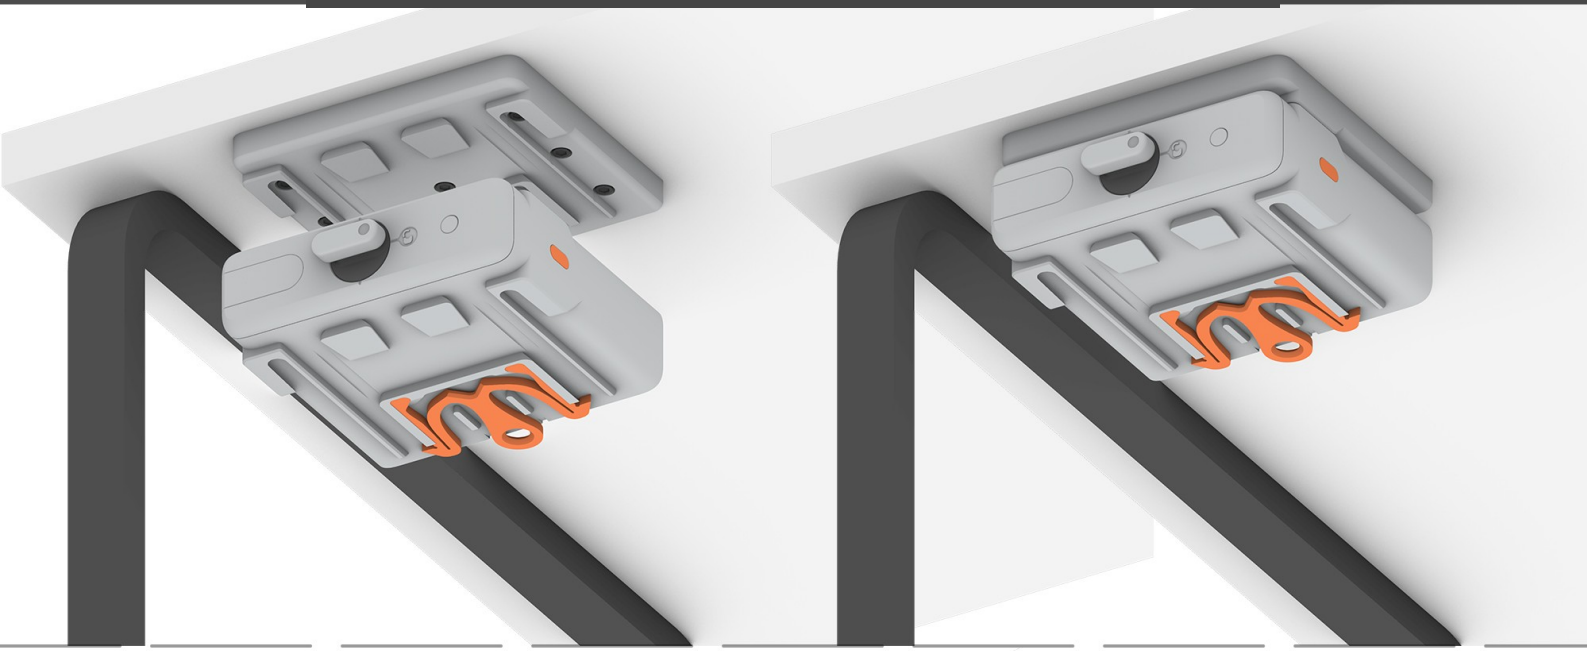

After printing the "Under Table Mount Roof", position it securely under the desk/table.

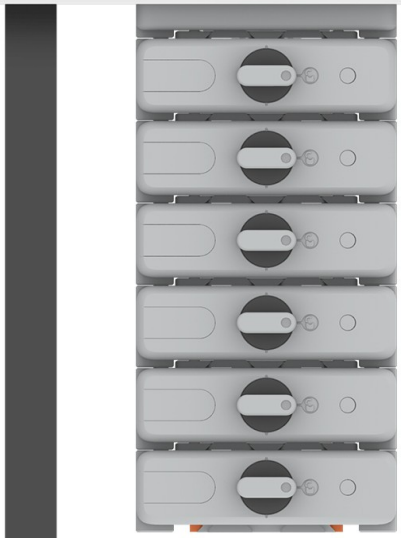

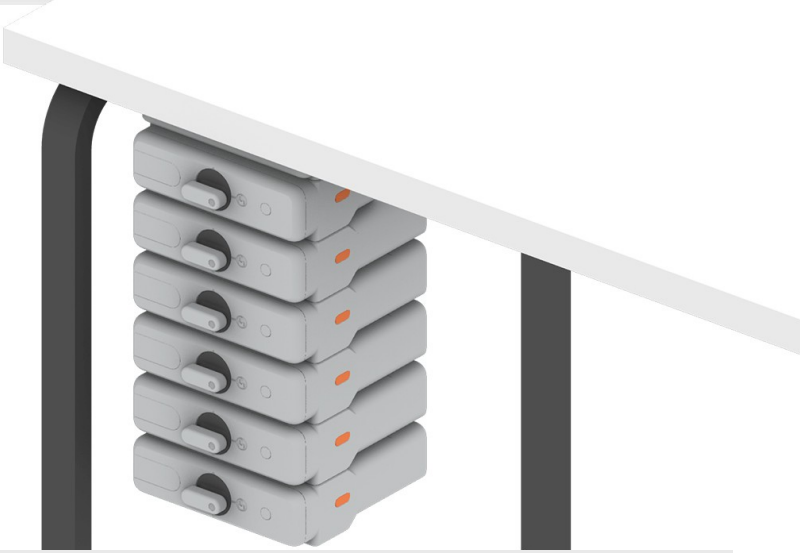

Use thread inserts or screws directly to firmly attach the roof underneath the table.

Table Mount Instructions 12/12

You can attach as many modules as you like beneath the table once roof is fixed.
